

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#3 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#6 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2} \text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#9 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) **Select** the **largest (longest)** wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i **or** **ii** **or** **iii**

(II) **Select** the **smallest (shortest)** wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i **or** **ii** **or** **iii**

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#12 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

#15 Page 2 of 10

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

(I) Select the largest (longest) wavelength from the three choices below:

- Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or **ii** or **iii**

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- Wavelength of photon *emitted* for an electron transitioning from $2p$ to $1s$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $2s$ to $4p$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $1s$ to $3p$ orbital

i
or
ii
or
iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#15 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

#17 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#20 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$

109.5°

>109.5 to $<120^\circ$

120°

$>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#23 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$

109.5°

>109.5 to $<120^\circ$

120°

$>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

#26 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

midterm-exam-93388

#27 Page 2 of 10

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

(I) Select the largest (longest) wavelength from the three choices below:

- Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- Wavelength of photon *emitted* for an electron transitioning from $2p$ to $1s$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $2s$ to $4p$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $1s$ to $3p$ orbital

i
or
ii
or
iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#29 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

Question 4 **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂O
CCl₄

XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

#34 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#37 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#40 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#43 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#46 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

midterm-exam-93388

#47 Page 2 of 10

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

(I) Select the largest (longest) wavelength from the three choices below:

- Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- Wavelength of photon *emitted* for an electron transitioning from $2p$ to $1s$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $2s$ to $4p$ orbital
- Wavelength of photon *absorbed* for an electron transitioning from $1s$ to $3p$ orbital

i **or** **ii** **or** **iii**

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#49 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

#51 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#54 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#60 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#63 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#68 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#71 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#74 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#77 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, A^{2+} .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#80 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#85 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#88 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#91 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#94 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#97 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#102 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#105 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i

or

ii

or

iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i

or

ii

or

iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#108 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#111 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#114 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, A^{2+} .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#119 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#122 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#125 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#128 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#131 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#136 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#139 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#142 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#145 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#150 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#153 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

midterm-exam-93388

#156 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#159 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#162 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#170 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#173 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, A^{2+} .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#176 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#179 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#187 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

#190 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

HClO_4 (there are no O-O bonds)

Label the most polar bond

Molecular Geometry around Cl

TeF_6

Molecular Geometry around Te

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to **label all the atomic and molecular orbitals**.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#193 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order

midterm-exam-93388

#196 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#201 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#204 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm**

Examiners: Pallavi Sirjoosingh and Ashok Kakkar

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

$>90^\circ$ to $<109.5^\circ$ 109.5° >109.5 to $<120^\circ$ 120° $>120^\circ$ to $<180^\circ$

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5°

109.5°

>109.5 to <120°

120°

>120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

#207 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **$n=3$** level of **He^+ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B^+)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- i. *Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- ii. *Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

Question 8 12 points

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
 A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
 A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

midterm-exam-93388

#210 Page 10 of 10

SCRAP PAGE

**CHEMISTRY 110 –Midterm Exam****Thursday November 7, 2024, 6:30 – 8:30 pm****Examiners: Pallavi Sirjoosingh and Ashok Kakkar**

First name (please write as legibly as possible within the boxes)

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Last name

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Student ID number

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

This booklet has 8 questions on 10 pages (The last page can be used as a scrap page).

The staple must NOT be removed from the question booklet. Your intact question booklet must be returned at the end of the exam.

A separate booklet contains a periodic table, and datasheet.

Write your answers directly under the questions in the space provided. Do not write on the QR codes or near the top edges (as it may be cut off).

Please write **legibly and dark enough** for the scan to be readable. For students who use English as a second language, dictionaries are permitted. Calculators are allowed.

DO NOT ASK QUESTIONS OF THE INVIGILATORS about interpretations of the exam questions. If you have a concern about a question, please summarize it at the top of this page. All concerns will be evaluated after the exam. GOOD LUCK!

**Question 1 8 points** (*Assume all transitions are possible*)

a. 6 points Calculate the **energy (in kJ/mol)** required to ionize (completely remove) the electron from the **n=3** level of **He⁺ ion** (He: Helium). Show your work including equations. (3 sig. figs.)

b. 2 points

(I) Select the largest (longest) wavelength from the three choices below:

- i. Wavelength of photon to *completely remove* an electron from *1s orbital of Hydrogen atom*
- ii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron atom (B)*
- iii. Wavelength of photon to *completely remove* an electron from *1s orbital of Boron cation (B⁺)*

i or ii or iii

(II) Select the smallest (shortest) wavelength from the three choices below (*for H atom*):

- i. Wavelength of photon *emitted* for an electron transitioning from *2p to 1s orbital*
- ii. Wavelength of photon *absorbed* for an electron transitioning from *2s to 4p orbital*
- iii. Wavelength of photon *absorbed* for an electron transitioning from *1s to 3p orbital*

i or ii or iii

Question 2 8 points

A Chem110 student plots the graph shown on the left, from data obtained for the kinetic energy (eV) of the ejected electron versus frequency (s^{-1}) of the incident light, for an unknown metal. ($1\text{eV} = 1.6022 \times 10^{-19} \text{ J}$)

Based on the plot, answer the questions **a to c** below:

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

a. 1 point On the plot above, label the **threshold frequency**.

b. 2 points What is the value of the work potential (in J) of the unknown metal?

c. 3 points What is the *longest* wavelength (in nm) required to eject an electron from this metal's surface? Show your work including equation(s) used. (3 sig figs)

d. 2 points In the space provided below, plot the following

(Assume frequency is *above* threshold frequency):

- Kinetic energy* of an ejected electron versus the *intensity* of the incident light (left)
- Number of electrons* ejected versus the *frequency* of the incident light (right)

**Question 3** **6 points****a. 2 points**

In the ground state of Ge (Germanium; $Z = 32$) atom, **name** the following orbitals:

i. Orbital containing the electron that requires the maximum energy to be removed.

ii. Orbital containing the electron that experiences the minimum effective nuclear charge.

b. 2 points

An unknown anion (A^-) has the following *excited* electronic configuration: $[Ar] 4s^2 3d^3 4p^1$

(Ar: Argon; $Z = 18$)

Give the **condensed ground state electronic configuration** of the atom, **A** and the cation, **A^{2+}** .
Show your work. (Assume all electronic transitions are possible)

Electronic Configuration of A:

Electronic Configuration of A^{2+} :

c. 2 points

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 5; l = 3$

In a single atom, determine how many electrons can have the following set of quantum numbers?

(i) $n = 3; l = 2; m_s = +1/2$

**Question 4** **8 points**

Rank the following from 1 to 4 in **increasing** order. Provide the ranking in the boxes provided.

Note: Atomic number (Z) are provided for relevant atoms

a) Increasing (lowest to highest) order of *ionization energy*: (1= lowest; 4 = highest)

Mg

Mg: Z = 12

Rb

Rb: Z = 37

Cs

Cs: Z = 55

K

K : Z = 19

b) Increasing (lowest to highest) order of *bond angle*: (1= lowest; 4 = highest)

H₂OCCl₄XeF₄

HCN

c) Increasing (smallest to largest) order of *ionic size* (1= smallest; 4 = largest)

S²⁻

S: Z = 16

O²⁻

O: Z = 8

Be²⁺

Be: Z = 4

Na⁺

Na: Z = 11

d) Increasing (lowest to highest) order of *bond energy* (1= lowest; 4 = highest)

P-F

P-Cl

P-I

P-Br

**Question 5** **12 points**

a. 9 points For the molecules HClO_4 and TeF_6 , draw the most stable *Lewis structure* showing appropriate shape and *dashed/wedged bonds*, based on VSEPR. Determine the **molecular geometry** around the central atom. For HClO_4 , label the *most polar bond*.

b. 3 points (Note: Lone pairs are not shown in structures below)

(i) For the three *resonance* structures (1, 2 and 3) shown below, answer the following question:

(I) Circle the *most contributing* resonance structure.

Structure 1

Structure 2

Structure 3

(ii) For the three structures given (4, 5, and 6) below, answer the following questions:

(I) Circle all the structures that represent *resonance structures* of each other:

Structure 4

Structure 5

Structure 6

(II) Among the resonance structures, circle the *most contributing* resonance structure.

Structure 4

Structure 5

Structure 6

**Question 6** **6 points**

Using the data given below, calculate the **lattice energy** for SrO(s).

	ΔH° (kJ/mol)
$\text{Sr}(s) \longrightarrow \text{Sr}(g)$	+180
$\text{Sr}(g) \longrightarrow \text{Sr}^{2+}(g) + 2e^-$	+1468
$\text{O}_2(g) \longrightarrow 2\text{O}(g)$	+500
$\text{O}(g) + 2e^- \longrightarrow \text{O}^{2-}(g)$	+600
$\text{Sr}(s) + \frac{1}{2}\text{O}_2(g) \longrightarrow \text{SrO}(s)$	-550

**Question 7 10 points**

Consider the molecule given on the left, and answer questions (i) to (vi) using chemical bonding theories that we have learnt in class (valence bond theory, hybridization).

Note that the lone pairs are not shown in the structure:

i. Consider the carbon atoms marked in as ***a***, ***b***, ***c***, ***d***, and ***e*** in the molecule, and determine **hybridization** at each of the carbon centers. (2.5 points)

Atom	Hybridization
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	
Carbon (<i>c</i>)	
Carbon (<i>d</i>)	
Carbon (<i>e</i>)	

ii. Now, consider the sulfur atom (S) marked as ***f***, nitrogen (N) atom (***g***), and oxygen(O) atoms (***h*** and ***i***), and determine their **hybridization**. (2 points)

Atom	Hybridization
Sulfur (<i>f</i>)	
Nitrogen (<i>g</i>)	
Oxygen (<i>h</i>)	
Oxygen (<i>i</i>)	

iii. **Describe** all the bonds formed by the carbon atoms ***a*** and ***b***, using sigma and pi designation as appropriate. (2 points)

Atom	Bonds formed (use sigma and pi as appropriate)
Carbon (<i>a</i>)	
Carbon (<i>b</i>)	

iv. How many total sp^3 -s sigma bonds are in the molecule? (1 point)

v. Determine **electronic** and **molecular geometry** at carbon (C) labeled ***e*** and sulfur (S) labeled ***f*** centres. (2 points)

Atom	Electronic Geometry	Molecular Geometry
Carbon (<i>e</i>)		
Sulfur (<i>f</i>)		

vi. Circle the value from the choices given below, that describes the **C-S-C bond angle at sulfur** (S) marked ***f***: (0.5 points)

>90° to <109.5° 109.5° >109.5 to <120° 120° >120° to <180°

**Question 8 12 points**

Using the **valence shell orbitals only** draw a **complete** molecular orbital (MO) diagram (with no s-p mixing) for the molecule **PS**, in the space provided below. **(6 points)**

Assume that 3s and 3p atomic orbitals will form molecular orbitals like those formed by the combination of 2s and 2p atomic orbitals that we learnt in class, and there is no s-p mixing.

Show **energy arrow**, **atomic orbitals** involved, **atom labels**, the **molecular orbitals** that are formed, **filled electrons** in the MO diagram etc. Make sure to label all the atomic and molecular orbitals.

Using the MO diagram above, answer the following questions:

- (i) Which one of the following will have the highest bond order? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (ii) Which one of the following will have the longest bond length? Circle the correct choice
A) PS^{1-} B) PS C) PS^{1+}
- (iii) Which of the following will be diamagnetic? Circle the correct choice.
A) PS^{1-} B) PS C) PS^{1+}
- (iv) Draw Lewis dot structure of the molecule with the shortest bond length (based on the MO diagram) from among the three (PS^{1-} , PS, PS^{1+}), and indicate the bond order calculated from the Lewis dot structure. **(3 points)**

Lewis Dot Structure

Bond Order
